

What do the lights mean?

On gray load control devices, the second light from the left (red) indicates you are being controlled. On black load control devices, a red light will be visible only during control.

Load Management Basics

June 1 - Sept 15
Daily from 9:00 AM - 11:00 PM

Everything You Need To Know

About PCRPPD Load Management

Repairs/Maintenance

Please plan your anticipated repairs and maintenance for your regularly scheduled control days.

We will do our best to assist with unexpected repairs requiring control release, however, this may not always be possible.

Control Days

Customers may reduce the number of control days anytime during the summer season. A \$60 fee will be charged along with additional horsepower charges.

Bypassing Devices

Customers may not bypass load management devices for any reason.

Customers are responsible for notifying PCRPPD prior to any repairs that require the load management device to be bypassed. Failure to do so may result in a \$250 fine and removal from load management rate.
